

# Diggs

A single-person booth providing comfort and privacy for concentrated work

orangebox

## Product Description

A single-person booth providing both comfort and privacy for concentrated work, featuring tactile solid oak worksurface and optional shelf.

Featuring the same high back screens as the modular Beyond the Desk product family, Diggs' design offers improved acoustics, reducing noise distractions and providing a more private, quiet environment for the user.

The optional shelf provides two levels for working, with raised space deep enough to accommodate a laptop or tablet for video conferencing. With the ability to swing the pivoting desk to an ergonomically advantageous position, this combination of high and low provides ample space for a variety of working tasks including writing notes during an online meeting.

An internal backrest provides lumbar support and shortens the seated depth, providing a healthy upright sitting position, which combined with the rotating ergonomic worksurface creates a calm space for concentrated work or meetings.

The upholstered high-back provides privacy and acoustic baffling. No glue is used in the upholstery, enabling simple re-upholstery and elongating product life cycle.

Diggs can be enhanced with power, a wall-mounted lamp and a coat hanger to keep the space tidy. The design is widely customisable, with the frame available in 5 powder coated finishes, and the ability to specify either mono-colour or two-toned upholstery.
